LET US ASK YOU TWO SIMPLE QUESTIONS

- ***What if someone formulated adhesives specifically for your unique needs?***
- ***Ready to rethink how adhesives can (and should) enhance your competitive advantage?***

WHY DO BUSINESS WITH US?

We're Available.

Our phones are answered by real, live, people providing responses in real-time.

We Care.

We cannot exist without our 2 most important resources: our customers and our employees. And we know, while adhesives may be your least expensive raw material, they can become a very expensive roadblock if they do not perform.

We Adapt.

Complementing our inventory of standard products, we also custom formulate to our customers' specific needs. This enables them to run their equipment most efficiently with less waste and the best overall adhesive performance.

We Respond.

At Baker Titan, exceptional customer service is our top priority. We respond to inquiries and issues with urgency and immediacy, ensuring timely and effective solutions. Whether addressing technical support or replenishing inventory, we strive to resolve matters in 24-48 hours.

ADHESIVES FORMULATED FOR YOU

Why "work through" issues with an adhesive that doesn't completely meet your needs, when you can work with a partner that listens and develops the right adhesive to meet your product and manufacturing demands?

We solve the problems others won't. We can maximize the performance of your adhesive by developing formulations crafted for one specific application—your business and your market.

BETTER KNOW-HOW TRANSLATES INTO BETTER PERFORMANCE

- Our sales teams understand the challenges in getting the right formulations and provide an informed perspective on how we can help.
- We work very closely with our suppliers to take a proactive approach to finding and testing new materials to lower cost and increase adhesive performance.
- We build a consultative relationship with our customers—and we don't make any changes without their understanding and approval.
- We help our customers adapt to new technologies and uncover new opportunities for lower cost and higher efficiency in their manufacturing.
